China has achieved remarkable, sustained economic growth under the policies of 'reform and opening up' put into place since the late 1970s. China's industrial policies have nurtured a large group of firms with high profits and a high market capitalisation. However, few people in the West can name a single Chinese firm. During the modern era of capitalist globalisation firms from the high income countries have spread their business systems across the world. This has presented a profound challenge for industrial policy in developing countries, including even China, the world's second largest economy. China is unique among large latecomer developing countries in having reached the position of being a huge, fast-growing economy, with a tremendous impact on the rest of the world, but lacking a substantial group of globally competitive firms. This volume explores this paradox. Fully understanding the industrial policy challenge that the era of capitalist globalisation has produced for China is essential for harmonious international relations.

This book discusses in a lucid and easy-to-understand manner, the theory and practise of international business in the Indian context. It provides an in-depth

‘Re-balancing China’ addresses three key sets of issues in China’s political economy. Part One provides an analysis of the profound effect of the global financial crisis upon China’s economy, as well as the positive impact of the massive rescue package that was implemented in response to the crisis. Part Two focuses on the challenge of globalization for China’s industrial policy. After more than two decades of industrial policy, China still has a negligible number of large firms that are competitive in global markets. China’s experience presents a fundamental challenge to traditional concepts of industrial policy and development. Part Three examines China’s international relations – in particular, its relationship

The impact of cars, trains, and planes on our landscape, buildings, and culture has been well documented, but an account of the history of elevators, escalators, and moving sidewalks has previously been far from complete. Filling this gap, this landmark publication documents the extraordinary impact of these methods of human conveyance on the urban and suburban landscape, building types, and culture worldwide. Though elevators, escalators, and moving sidewalks are used by millions of people daily, they are often taken for granted by their riders. By design, many of these devices have become seamless within their surroundings. Function has often superseded form, as building and station managers have sought to move tenants and passengers through to their destinations with ease and efficiency. Yet there is a re-emerging desire to make conveyance mechanisms the spectacles they once were. Elevators and their support frames pulled out from hidden shafts for display in soaring atriums, escalators with different coloured steps and handrails, and moving sidewalks that turn corners are just some of the innovations that are helping these devices to get noticed. Engagingly
