Rated by an independent panel as the best introductory Global Health text for undergraduates, Global Health 101, Third Edition is a clear, concise, and user-friendly introduction to the most critical issues in global health. It illustrates key themes with an extensive set of case studies, examples, and the latest evidence. Particular attention is given to the health-development link, to developing countries, and to the health needs of poor and disadvantaged people. The Third Edition is a thorough revision that offers an extensive amount of new and updated information, while maintaining clarity, simplicity, and ease of use for faculty and students. Offering the latest data on the burden of disease, the book presents unique content on key topics that are often insufficiently covered in introductory materials, such as immunization and adolescent health. Key Features: • New chapter on Adolescent Health:an important but largely uncovered topic in the existing Global Health literature • Expanded chapter on Child Health with special attention given to immunizations • Expanded coverage throughout on the topic of health disparities • The latest information on nutrition including the Global Nutrition Report of November 2014 and the Lancet Series on Maternal and Child Nutrition of 2013 • New section on Pharmaceuticals • More than 25 additional • Policy and Program • briefs that cover a range of key topics Includes Navigate 2 Advantage Access with: A comprehensive, interactive eBook with embedded video links, knowledge checks and end-of-chapter quizzes Interactive practice activities including study questions Pre-loaded assessments including chapter quizzes, mid-terms, and a final exam. An expansive package of instructor materials including: sample syllabi, model policy briefs, a case study for discussion for each of the core chapters of the book, and an extensive bibliography of global health references organized by chapter.

In keeping with the previous edition - which was independently rated as the best global health book for undergraduates - Global Health 101, Fourth Edition is a clear, concise, and user-friendly introduction to the most critical issues in global health, illustrating key themes with an extensive set of case studies, examples, and the latest evidence. Drawing from his 40 years of experience working in international development and global health, as well as extensively teaching at both Yale and George Washington University, Richard Skolnik has substantially revised his bestselling textbook. This edition offers a significant amount of new and updated information, while maintaining the clarity, simplicity, and ease of use that has made this text so popular. Global Health 101, Fourth Edition builds in unique ways on evidence from a number of fundamental sources, including the Global Burden of Disease Studies, Disease Control Priorities, Third Edition, (DCP3), and Millions Saved.

What is global health and why is it so important? -- Health determinants, measurements, and the global burden of disease -- Health systems and universal health coverage -- Environmental and occupational health and intersectoral approaches -- Nutrition and the health of women, children, and adolescents -- Communicable diseases -- Noncommunicable diseases, mental health, and injuries.

Case Studies in Global Health: Millions Saved consists of 20 case studies, which illustrate real life, proven, large-scale success stories in global public health. Drawing from a rich evidence base, the accessible case write-ups highlight experiences in the scale up of health technologies, the strengthening of health systems, and the use of health education and policy change to achieve impressive reductions in disease and disability, even in the poorest countries. An overview chapter draws attention to the factors that contributed to each of the successes. Discussion questions help to bring out the main points and provide a point of departure for independent student research. Useful as a stand-alone text or as a complement to Essentials of Global Health, this book provides readers with a clear and inspiring picture of how global public health efforts have made a difference in the lives of people around the world.

Health Sciences & Professions

This unique introduction to the essentials of global health has been constructed by medical students from all over the world through the help of Medsin (now Students for Global Health) and the International Federation of Medical Students' Association (IFMSA). The global student and trainee author team, recruited and guided initially by Drs Dan and Felicity Knights (themselves students and officers of Medsin when work commenced), identified the key areas to be covered. Then the book they put together was edited by two experts in the field: Mr B Sethia and Professor Parveen Kumar. Royalties raised from this book go to a grant fund for student global health projects. Written by medical students and junior doctors from Students for Global Health and the International Federation of Medical Students' Association (IFMSA). Edited by two experts in the field, Mr B Sethia and Professor Parveen Kumar. Royalties go to a grant fund for student global health projects.

Over the past fifteen years, people in low- and middle-income countries have experienced a health revolution: one that has created new opportunities and brought new challenges. It is a revolution that keeps mothers and babies alive, helps children grow, and enables adults to thrive. Millions Saved: New Cases of Proven Success in Global Health chronicles the global health revolution from the ground up, showcasing twenty-two local, national, and regional health programs that have been part of this global change. The book profiles eighteen remarkable cases in which large-scale efforts to improve health in low- and middle-income countries succeeded, and four examples of promising interventions that fell short of their health targets when scaled-up in real world conditions. Each case demonstrates how much effort—and sometimes luck—is required to fight illness and sustain good health. The cases are grouped into four main categories, reflecting the diversity of strategies to improve population health in low-and middle-income countries: rolling out medicines and technologies; expanding access to health services; targeting cash transfers to improve health; and promoting population-wide behavior change to decrease risk. The programs covered also come from various regions around the world: seven from sub-Saharan Africa, six from Latin America and the Caribbean, five from East and Southeast Asia, and four from South Asia.
