Description: Testing of composite materials can present complex problems but is essential in order to ensure the reliable, safe and cost-effective performance of any engineering structure. This essentially practical book, compiled from the contributions of leading professionals in the field, describes a wide range of test methods which can be applied to various types of advanced fibre composites.

Mechanical Testing of Advanced Fibre Composites
Focusing on composites of advanced fibres in a plastic matrix, Mechanical Testing of Advanced Fibre Composites provides the background and general principles to tackle such problems. Expert contributors examine how these materials react to all types of loading, including tensile, compressive, shear, short- or long-term, and in various environments that might significantly modify their behavior.

Mechanical testing of advanced fibre composites Dummy gauges are the preferred method for temperature compensation but, again, precise alignment is needed. It is necessary to mount the dummy gauges on an 'identical' piece of laminate, with the same orientation relative to the fibres as used for the active gauges.

Mechanical Testing of Composites. The objective of the mechanical testing of composite is the determination of mechanical parameters such as strength and stiffness that will be later used on the design of a composite structure. Referring to the classical laminate theory, 5 elastic properties (E 1, E 2, nu 12, nu 23 and G 12) are necessary to calculate the elastic behaviour of a long fibre reinforced composite.

Just as contemporary carbon fiber composites represent advanced materials for manufacturing, they are commonly inspected by advanced ultrasonic instruments employing phased array imaging technology. While the size, shape and thickness of CFRP parts varies significantly, the nature of commonly occurring defects is ideally suited for compressional wave pulse echo ultrasonic inspection.

Attenuation test is the most important routine test for a fiber optic cable. Attenuation test are conducted by using OTDR according to IEC 60793-1-40C on finished fiber optic cables in fiber cable manufacturing industry. The equivalent EIA/TIA test method is TIA/EIA-455-61A or FOTP-61. There are some customers who insist to test attenuation on all the fibers in a fiber optic cable using the cut-back method.
