Liberal democracy, it has been claimed, stands at the end of history. But there are hidden internal strains that could threaten its fabric. Nature and Liberty explores three of the most important practical problems of modern liberal politics - those connected with ethnicity and race, sex and the family, and bureaucratized government. The author traces liberals' difficulties in dealing with these problems to their own reluctance to have recourse to nature as a guide for political life.

Anthropology, with its dual emphasis on biology and culture, is--or should be--the discipline most suited to the study of the complex interactions between these aspects of our lives. Unfortunately, since the early decades of this century, biological and cultural anthropology have grown distinct, and a holistic vision of anthropology has suffered. This book brings culture and biology back together in new and refreshing ways. Directly addressing earlier criticisms of biological anthropology, Building a New Biocultural Synthesis concerns how culture and political economy affect human biology--e.g., people's nutritional status, the spread of disease, exposure to pollution--and how biological consequences might then have further effects on cultural, social, and economic systems. Contributors to the volume offer case studies on health, nutrition, and violence among prehistoric and historical peoples in the Americas; theoretical chapters on nonracial approaches to human variation and the development of critical, humanistic and political ecological approaches in biocultural anthropology; and explorations of biological conditions in contemporary societies in relationship to global changes. Building a New Biocultural Synthesis will sharpen and enrich the relevance of anthropology for understanding a wide variety of struggles to cope with and combat persistent human suffering. It should appeal to all anthropologists and be of interest to sister disciplines such as nutrition and sociology. Alan H. Goodman is Professor of Anthropology, Hampshire College. Thomas L. Leatherman is Associate Professor of Anthropology, University of South Carolina.

The second edition of this book on lipids, lipoprotein and membrane biochemistry has two major objectives - to provide an advanced textbook for students in these areas of biochemistry, and to summarise the field for scientists pursuing research in these and related fields. Since the first edition of this book was published in 1985 the emphasis on research in the area of lipid and membrane biochemistry has evolved in new directions. Consequently, the second edition has been modified to include four chapters on lipoproteins. Moreover, the other chapters have been extensively updated and revised so that additional material covering the areas of cell signalling by lipids, the assembly of lipids and proteins into membranes, and the increasing use of molecular biological techniques for research in the areas of lipid, lipoprotein and membrane biochemistry have been included. Each chapter of the textbook is written by an expert in the field, but the chapters are not simply reviews of current literature. Rather, they are written as current, readable summaries of these areas of research which should be readily understandable to students and researchers who have a basic knowledge of general biochemistry. The authors were selected for their abilities both as researchers and as communicators. In addition, the editors have carefully coordinated the chapters so that there is little overlap, yet extensive cross-referencing among chapters.

This new companion to Hochberg et al.'s Rheumatology masterwork provides new insights into the causes, detection and therapy of this challenging disease. In this state-of-the-art resource, you'll find 'one stop' coverage of all the latest scientific and clinical developments in SLE: new concepts in epidemiology, disease activity measures and outcomes; new concepts in immunoregulation, genetic and pathogenic mechanisms; new understanding and novel presentation of the processes of tissue/organ damage; comprehensive coverage of clinical features; and the very latest concepts in treatment. Provides the very latest understanding of the pathogenesis of SLE. Distills current understanding of the cellular, molecular, genetic and environmental factors that instigate and drive the disease. Includes comprehensive coverage of clinical features, including fatigue, organ system manifestations, overlap syndromes, infections, and more. Conveys the very latest understanding of mechanisms of tissue damage, including immune complexes, antibodies, and other mechanisms that lead to organ damage. Contains expert discussion of processes that are responsible for tissue injury - a hallmark of this text. Incorporates the latest treatment modalities, including steroids and non-steroidals, cytotoxic drug treatment, PAP's, and therapies on the horizon. Discusses the latest treatment options on disease modifying or disease controlling agents.

1. Characteristics of Waves 2. Sound 3. The Electromagnetic Spectrum 4. Light

For the general public, magnetism often seems more the province of new age quacks, movie mad scientists, and grade-school teachers than an area of actual, ongoing scientific inquiry. But as Ronald T. Merrill reveals in Our Magnetic Earth, geomagnetism really is an enduring, vibrant area of science, one that offers answers to some of the biggest questions about our planet's past—and maybe even its future.
