First, it helps you achieve a serious goal: to blend 12 areas of general biology with quantitative reasoning in ways that will make your students better at evaluating product claims and news reports. Second, its 51 case studies are a great way to get students engaged in science. Who wouldn't be glad to skip the lecture and instead delve into investigating cases with titles like these: • “A Can of Bull? Do Energy Drinks Really Provide a Source of Energy?” • “ELVIS Meltdown! Microbiology Concepts of Culture, Growth, and Metabolism” • “The Case of the Druid Dracula” • “As the Worm Turns: Speciation and the Maggot Fly” • “The Dead Zone: Ecology and Oceanography in the Gulf of Mexico” Long-time pioneers in the use of educational case studies, the authors have written two other popular NSTA Press books: *Start With a Story* (2007) and *Science Stories: Using Case Studies to Teach Critical Thinking* (2012). *Science Stories You Can Count On* is easy to use with both biology majors and nonscience students. The cases are clearly written and provide detailed teaching notes and answer keys on a coordinating website. You can count on this book to help you promote scientific and data literacy in ways to prepare students to reason quantitatively and, as the

In vivid and indelible prose, Pulitzer Prize-winner John Hersey traces the stories of these half-dozen individuals from 8:15 a.m. on August 6, 1945, when Hiroshima was destroyed by the first atomic bomb ever dropped on a city, through the hours and days that followed. Almost four decades after the original publication of this celebrated book, Hersey went back to Hiroshima in search of the people whose stories he had told, and his account of what he discovered is now the eloquent and moving final chapter of Hiroshima.

What Stiff did for the dead and Fast Food Nation did for the burger, Dog, Inc. does for the stranger-than-fiction world of commercial dog cloning. It all began with a pit bull named Booger. Former Miss Wyoming Bernann McKinney was so distraught over the death of her dog, whom she regarded as her guardian and savior, that she paid \$50,000 to RNL Bio for the chance to bring her beloved companion back to life. The result were five new Boogers—the first successful commercial cloning of a canine—delivered in 2008, along with a slew of compelling questions about the boundaries of science, commerce, and ethics. Blending shocking investigative reporting with colorful anecdotes, Pulitzer Prize-winning John Woestendiek takes readers behind the scenes of this emerging industry. But Dog, Inc. isn't just a book about pets. Nor is it just a book about science. Rather it's a fascinating look at how our emotional needs are bending the reaches of science and technology, as well as a study of this uncharted
