I made Report Card Comments generator for IB PYP students a few years ago. It is based on PYP scope and sequence. There are over 300 comments in one file for boy and girl student. Report card comment has to change name and gender for individual students. This Excel file is useful but little bit complicated to use, even I made it by myself.

How to create report card comments in IB PYP ...
The word is well and truly out. The newest hub bub in the IB world is the Approaches to Learning Skills. Formerly known by the International Baccalaureate Organisation as the Transdisciplinary Skills, these are, simply put, a set of skills that we use when we are involved in learning. They come grouped into five sets: Thinking, Social, Self Management, Research and Communication.

Traditional methods of viewing the world through the scientific method or instrumental knowledge do not adequately serve the needs of theory, research, and practice within an increasingly complex world. Through transdisciplinary theory, the focus is on a new form of learning and problem solving involving cooperation among different parts of society to meet the complex challenges of society. The Handbook of Research on Transdisciplinary Knowledge Generation is a critical scholarly resource that examines mutual learning across disciplinary lines as a strategy by which to understand the world and apply practical knowledge. Featuring a wide array of topics such as linguistic diversity, medical education, and social constructivism, this book is essential for educational professionals, researchers, students, administrators, and academicians.

Health Technology Literacy: A Transdisciplinary Framework for Consumer-Oriented Practice examines the wide range of resources used by health consumers to inform and support their decisions around their own health care. Today's health consumer is self-monitoring, building supportive social networks online or via cell phone, and engaging in treatment using interactive programs online, on CD or related media. Using evidence-based practice and relevant theories, this unique text analyzes the trend for health care systems to be reactive, while consumers are proactively seeking the health care information they feel they deserve.

Over the past decade, integrated STEM education research has emerged as an international concern, creating around it an imperative for technological and disciplinary innovation and a global resurgence of interest in teaching and learning to code at the K-16 levels. At the same time, issues of democratization, equity, power and access, including recent decolonizing efforts in public education, are also beginning to be acknowledged as legitimate issues in STEM education. Taking a reflexive approach to the intersection of these concerns, this book presents a collection of papers making new theoretical advances addressing two broad themes: Transdisciplinary Approaches in STEM Education and Bodies, Hegemony and Decolonization in STEM Education. Within each theme, praxis is of central concern including analyses of teaching and learning that re-imagines disciplinary boundaries and domains, the relationship between Art and STEM, and the design of learning technologies, spaces and environments. In addition to graduate research seminars at the Masters and PhD levels in Learning Sciences, Science Education, Educational Technology and STEM education, this book could also serve as a textbook for graduate and pre-service teacher education courses.

This exciting new state-of-the-art book reviews, explores and advocates ways in which collaborative research endeavours can, through a transdisciplinary lens, enhance student, academic and social experiences. Drawing from a wide range of knowledges, contexts, geographical locations and internationally renowned expertise, the book provides a unique look into the world of transdisciplinary thinking, collaborative learning and action. In doing so, the book is action orientated, reflective, theoretical and intriguing and provides a place for all of these to meet and mingle in the spirit of curiosity and imagination.

The authors explain the development of the music therapist's role within the multidisciplinary team and discuss the prevalence of collaborative partnerships between UK music therapists and other professionals such as occupational therapists, speech and language therapists, psychologists, physiotherapists and other arts therapists.

Transdisciplinary research is issue-driven, addressing contemporary social questions from a range of critical theoretical perspectives unhampered by the theoretical and methodological restrictions of traditional disciplinary boundaries. In this brief, informative guide, Patricia Leavy shows how a transdisciplinary approach can produce more effective results for researchers hoping to ameliorate social problems and foster social justice. Leavy demonstrates the value of transdisciplinary approaches in mixed methods design, and how trans approaches actually help fulfill the promises and goals of mixed methods research. She explains its relationship to multi-disciplinary and interdisciplinary research and its value in community-based and arts-based research projects. Providing the key principles and methods needed to conduct a transdisciplinary study, Leavy also offers numerous examples from multiple research sectors to show its effectiveness. Ideal as a brief introductory text for students engaged in this style of research.

The book explores various facets of transdisciplinarity in mathematics education and its importance for research and practice. The book comprehensively outlines the ways that mathematics interacts with different disciplines, world views, and contexts; these topics include: mathematics and the humanities, the complex nature of mathematics education, mathematics education and social contexts, and more. It is an invaluable resource for mathematics education students, researchers, and practitioners seeking to incorporate transdisciplinarity into their own practice.

This book investigates the multifaceted nature of change in today's Nordic Arctic and the necessary research and policy development required to address the challenges and opportunities currently faced by this region. It focuses its attention on the recent efforts of the Nordic community to create specialized Centers of Excellence in Arctic Research in order to facilitate this process of scientific inquiry and policy articulation. The volume seeks to describe both the steps that lead to this decision and the manner in which this undertaking as evolved. The work highlights the research efforts of the four Centers and their investigations of a variety of issues including those related to ecosystem and wildlife management, the revitalization resource dependent communities, the emergence of new climate-born diseases and the development of adequate modeling techniques to assist northern communities in their efforts at adaptation and resilience building. Major discoveries and insights arising from these and other efforts are detailed and possible policy implications considered. The book also focuses attention on the challenges of creating and supporting multidisciplinary teams of researchers to investigate such concerns and the methods and means for facilitating their collaboration and the integration of their findings to form new and useful perspectives on the nature of change in the contemporary Arctic. It also provides helpful consideration and examples of how local and indigenous communities can be engaged in the co-production of knowledge regarding the region. The volume discusses how such research findings can be best communicated and shared between scientists, policymakers and northern residents. It considers the challenges of building common concern not just among different research disciplines but also between bureaucracies and the public. Only when this bridge-building effort is undertaken can true pathways to action be established.

The ancient doctrine of negative theology or apophasis--the attempt to describe God by speaking only of what cannot be said about the divine perfection and goodness--has taken on new life in the concern with language and its limits that preoccupies much postmodern philosophy, theology, and related disciplines. How does this mystical tradition intersect with the concern with material bodies that is simultaneously a focus in these areas? This volume pursues the unlikely conjunction of apophasis and the body, not for the cachet of the "cutting edge" but rather out of an ethical passion for the integrity of all creaturely bodies as they are caught up in various ideological mechanisms--religious, theological, political, economic--that threaten their dignity and material well-being. The contributors, a diverse collection of scholars in theology, philosophy, history, and biblical studies, rethink the relationship between the concrete tradition of negative theology and apophatic discourses widely construed. They further endeavor to link these to the theological theme of incarnation and more general issues of embodiment, sexuality, and cosmology. Along the way, they engage and deploy the resources of contextual and liberation theology, post-structuralism, postcolonialism, process thought, and feminism. The result not only recasts the nature and possibilities of theological discourse but explores the possibilities of academic discussion across and beyond disciplines in concrete engagement with the well-being of bodies, both organic and inorganic. The volume interrogates the complex capacities of religious discourse both to threaten and positively to draw upon the material well-being of creation.
