This book serves as an introduction to cryocooler technology and describes the principle applications of cryocoolers across a broad range of

Acces PDF

Thermo

fields. It covers the specific requirements of these applications, and describes how the advantages and disadvantages of different cryocooler systems are taken into consideration. For example, Stirling coolers tend to be used only in space applications because of their high

Acces PDF

Thermo

coefficient of performance, low weight and proven reliability, whilst Gifford-McMahon coolers are used for ground applications, such as in cryopumps and MRI shield cooling applications. Joule-Thomson cryocoolers are used in missile technology because of the fast

Acces PDF

Thermo

cool down

requirements. The cryocooler field is fast developing and the number of applications are growing because of the increasing costs of the cryogenes such as Helium and Neon. The first chapter of the book introduces the different types of cryocoolers, their

Acces PDF

Thermo

classification,
working principles,
and their design
aspects, and briefly
mentions some of the
applications of these
systems. This
introductory chapter
is followed by a
number of
contributions from
prominent
international
researchers, each

Acces PDF

Thermo

describing a specific field of application, the cooling requirements and the cryocooler systems employed. These areas of application include gas liquefaction, space technology, medical science, dilution refrigerators, missile systems, and physics research including

Acces PDF

Thermo

particle accelerators.

Each chapter

describes the cooling requirements based on the end use, the

approximate cooling

load calculations, the criteria for cryocooler

selection, the arrangement for

cryocooler placement, the connection of the

cooler to the object to be cooled, and

be cooled, and

Acces PDF

Thermo

includes genuine case studies. Intended primarily for researchers working on cryocoolers, the book will also serve as an introduction to cryocooler technology for students, and a useful reference for those using cryocooler systems in any area of application.
