two coils. If one coil is connected with ac... Question 3. ...

300+ [UPDATED] Transformer Interview Questions  
Transformers Interview Questions & Answers Why is transformer flux constant? When a load is connected to a transformer current (say  $I_2$ ) flows through secondary coil thus an M.M.F ( $N_2 I_2$ ) is produced, this produces the secondary flux. This flux reduces the main flux induced in the primary & also reduces E.M.F  $E_1$  in the primary.

What is a transformer?

# Online Library Transformer Interview Questions With

Answers Electrical

Transformer is a static electrical device which transfers power from one circuit to another circuit without any physical contact. The main aim of this transformer is that the output power of the transformer is same as output power. The term static indicates that it does not contain any rotating part in it.
